TABLE OF CONTENTS

A story of success.

When TriOS Mess- und Datentechnik GmbH was founded in 1998, the further development path was not foreseeable. With the R&D project funded under the project name RAMSES by the BMBF (Federal Ministry of Education and Research), the foundation stone for a success story in optical measurement technology was laid during the founding phase of TriOS GmbH. RAMSES was the first spectral-resolution light measurement instrument available on the market for use in marine research.

Today, the product name „RAMSES“ is synonymous with compact, robust and reliable light measurements, with over a thousand instruments in use worldwide - the clear No. 1 in the world. The instruments are routinely used to measure light distribution in the water column as well as for validation and calibration of advanced environmental satellite data (e.g. MERIS). The sensors have proven their reliability in many adverse environmental conditions, such as in Antarctica, but also in unusual locations such as offshore racing yachts in the Volvo Ocean Race. Many Norwegian vacationers accompany the devices, even if certainly not consciously perceived, on their journey along the fjords on the ships of the Hurtigruten.

Today, the former university spin-off, which has been managed by Rüdiger Heuermann alone since 2000, has become a leading company in the field of optical immersion sensors.

In addition to the original RAMSES radiometers, the TriOS product range has expanded visibly. Innovative measuring instruments for algae detection, for the measurement of smallest amounts of oil in water, the reagent-free determination of nutrients and organic substances followed, whereby the business field of TriOS Mess- und Datentechnik GmbH has expanded far beyond the field of marine technology into water quality, drinking water and wastewater monitoring and many industrial applications. Among other things, TriOS is one of the leading companies in the field of oil-in-water monitoring and thus makes a significant contribution to reducing environmental pollution caused by oil discharges.

With the expansion of the product range and the increase in the number of units produced, the need for production space and qualified employees grew. Thus, the move to the newly built company headquarters in Rastede took place in July 2011. This laid the foundation for significantly increasing the vertical range of manufacture by means of in-

house CNC machining, modern PCB assembly and device production, and thus having all quality-relevant processes in-house. In 2019, the company premises were also expanded with additional warehouse and production buildings to meet the enormous market demand. Equipped with state-of-the-art technology, this has also allowed development to grow and deepen in-house. Almost all TriOS products thus rightly bear the status „Made in Germany“. TriOS has remained true to its drive for innovation. One of the latest TriOS products on the market is the EGC Water Analyzer - a measuring cabinet for determining various parameters in wash

water from exhaust gas scrubbers on ships. It can be equipped with three types of sensors: the enviroFlu for PAH, the TTurb for turbidity and the TpH-D for pH. In addition, the flow rate, temperature as well as the turbidity-corrected PAH value can be determined.

In addition, novel sensors for environmentally relevant parameters are currently being developed in several research projects in cooperation with universities and research institutes. Many of our customers are also partners in the development of new products.

My special thanks, also on behalf of all TriOS employees, go to these partners, without whom TriOS would not exist in its current form.

Rüdiger Heuermann
Managing Director

PHOTOMETER

OPUS

12SXXXXX0

OPUS is the new generation of spectral sensors for online measurement of nitrogen and carbon compounds. Through the analysis of a full spectrum, OPUS is able to deliver reliable readings for NO_3-N, NO_2-N, organic ingredients (COD_{eq}, BOD_{eq}, DOC_{eq}, TOC_{eq}), and a number of other parameters.

Benefits

- Without sampling and preparation of test samples
- Real-time sensor
- Without reagents
- Optical window with nano coating
- Pre-installed application calibration

Applications

- Sewage treatment plants
- Environmental monitoring
- Drinking water monitoring
- Industrial applications

OPUS aero

12SXXXXXX

OPUS aero is the new generation of spectral sensors for online measurement of nitrate and nitrite in wastewater aeration tank. By analyzing a complete spectrum, OPUS aero is able to provide reliable readings for either NO_3-N only or NO_3-N and NO_2-N, depending on the calibration.

Benefits

- Without sampling and preparation of test samples
- Real-time sensor
- Without reagents
- Optical window with nano coating
- Pre-installed application calibration

Applications

- Wastewater aeriation tank

NICO

15SXXXXXX

Based on the innovative instrument platform concept of TriOS, on which OPUS, LISA and VIPER, among others, are based, NICO is a cost-effective UV photometer for nitrate determination. The three detection channels provide precise optical nitrate determination by absorption, taking into account turbidity and organics, which are a problem with many products currently on the market.

An internal temperature correction additionally increases the stability of the measured values.

Benefits

- Proven UV-absorption method
- Without sampling and preparation of test samples
- Real-time sensor
- Without reagents
- Optical window with nano coating

Applications

- Sewage treatment plants
- Environmental monitoring
- Drinking water monitoring

NICO plus

16AXX10X0

As a new all-rounder, NICO plus not only offers the parameters NO_3-N, NO_3, NO_x-N and NO_x previously known from NICO, but has now been expanded to include numerous parameters. These include UVT_{254}, UVT_{254n}, SAK_{254}, CSB_{eq}, BSB_{eq}, TOC_{eq}, DOC_{eq}, turbidity and TSS_{eq}.

An internal temperature correction additionally increases the stability of the measured values.

Benefits

- Proven UV-absorption method
- Without sampling and preparation of test samples
- Real-time sensor
- Without reagents
- Optical window with nano coating

Applications

- Sewage treatment plants
- Environmental monitoring
- Drinking water monitoring

LISA UV

14SXXXXX0

Long-lasting and energy-efficient UV-LED technology and a robust design are the outstanding features of LISA UV. Like all TriOS sensors LISA uses the unique nanocoated windows combined with compressed air flushing to achieve long operating times without cleaning.

The optical path length can be adapted to the application at any time by various adapters. An automatic turbidity compensation is carried out via a second measuring channel.

Through application-specific correlation LISA UV can be configured for direct output of BOD_{eq}, COD_{eq}, TOC_{eq} and UVT.

Benefits

- Without sampling and preparation of test samples
- Real-time sensor
- Without reagents
- Optical window with nano coating
- LED technology

Applications

- Sewage treatment plants
- Environmental monitoring
- Drinking water
- Monitoring of UV-disinfection systems

VIPER

17SXXXXX0

VIPER measures spectrally resolved attenuation in the wavelength range between 360 nm and 720 nm and thus allows the detailed determination of several parameters at the same time. 5 selected and energy-saving LEDs serve as the light source, ensuring stable measurement data and a long service life. VIPER can be used in a wide variety of media, as it is available in several path lengths and in both stainless steel and titanium. Applications for VIPER include water monitoring, colour measurement of aqueous solutions or quality monitoring of drinking water. Like every TriOS sensor, VIPER is equipped with nano-coated optical windows to prevent dirt build-up. Additional parameters can be installed later using software, if necessary.

Benefits

- without sampling and sample preparation
- without delay
- without reagents
- optical windows with nanocoating
- LED technology

Applications

- Environmental monitoring
- Drinking water monitoring
- Colour measurement
- Quality assurance
- Petrochemistry

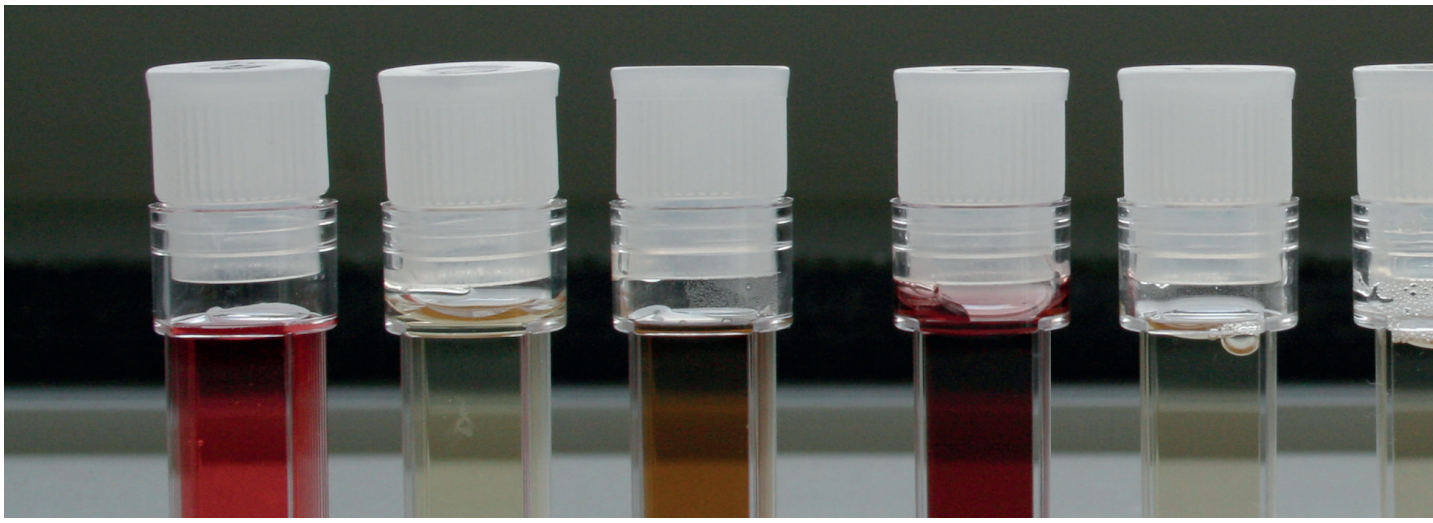
Inflow velocity		0.1...10 m/s	~ 0.33 fps to 33 fps



Colour Measurement

VIPER is an in-situ VIS spectrophotometer to determine the colour of liquids. In addition to the hyperspectral recording of spectra (2.2 nm/pixel), various colour numbers can be determined. This enables standardized, safe and objective measurements. Time-consuming and expensive sampling is eliminated by in-situ measurements. What‘s more, variations over a whole day can be recorded.

SAC_{436} (DIN EN ISO 7887: 2012-04)

Spectral absorption coefficients at 436 nm are designated SAC_{436}. It represents the light attenuation of an aqueous sample with a layer thickness of 1 m and a wavelength of 436 nm. The yellow to brown colour ranges that occur in coloured water have the highest light attenuation at 436 nm, which is why for example the colouring is determined according to drinking water regulations at this wavelength.

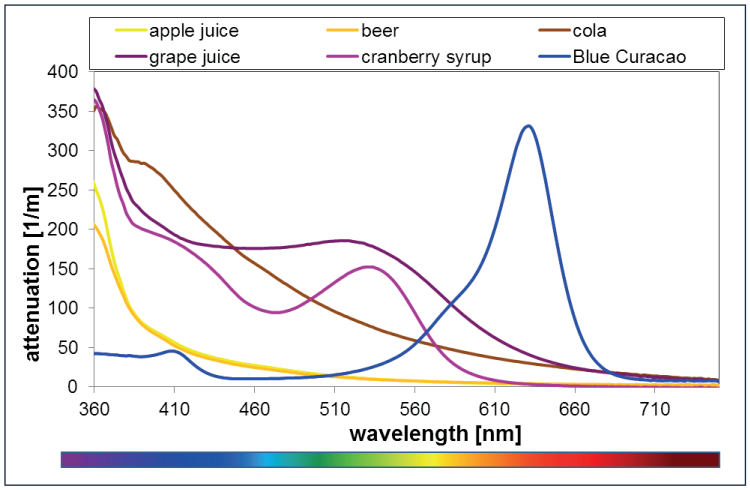
VIPER compensates for any turbidity when determining SAC_{436}.

Depending on the customer‘s request, SACs in the entire wavelength range (such as SAC_{525}, SAC_{620}) can be determined, or individual opacity adjustments can be made.

Pt-Co colour scale (Hazen/APHA) (DIN EN ISO 6271:2016-05)

The Pt-Co colour number records the range from colourless (<1) to light yellow to orange (500). The colour number is defined via a standard solution of hexachloroplatinate in acidic salt water and specified in mg/L Pt.

The Pt-Co colour number is calculated using the turbidity corrected attenuation at 455 nm or 390 nm.

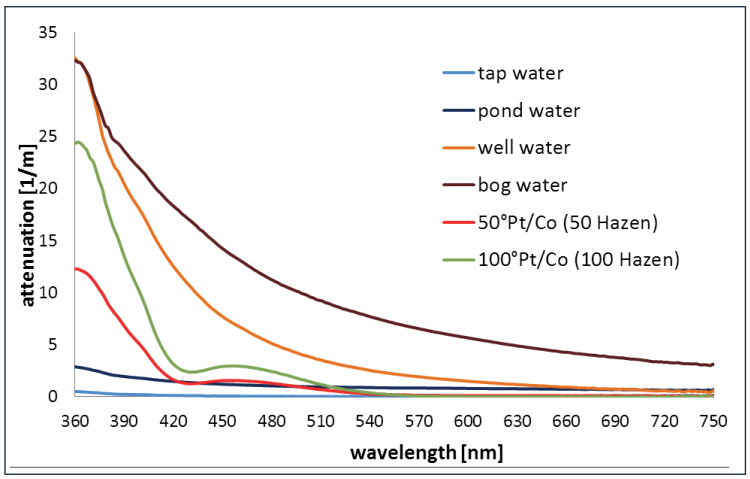


Colouring

VIPER enables hyperspectral measurements of the colour of each liquid.

This also allows the differentiation of colours that are perceived immediately, but consist of different colour mixes.

The diagram on the left shows examples from the beverage industry.



VIPER: Attenuation spectrum

Subsequent calculation of colour numbers is also possible thanks to the storage of spectra. VIPER therefore enables several colour numbers to be simultaneously calculated from a spectrum. In addition to the above colour numbers, the device can determine the Cr-Co colour number (Russian grade) in accordance with GOST 3351-74, which is interesting for the Russian market. Please contact us for any special applications. We will be happy to help.

LISA color

5XSXXXXX0

Colorimetry – LISA enables reliable low-cost colour measurements. The LISA color uses two different LEDs for long-term stable measurement of the SAC or color at different wavelengths. The second channel is used for turbidity/background correction. The cutting-edge device platform, used in all other TriOS photometers, enables optical path lengths of 50, 100, 150, and 250 mm, so that almost any application can be easily implemented.

With the optional titanium housing, the LISA color can also be used for applications in aggressive media (e.g. high chloride concentrations).

Benefits

- Low investment
- Low maintenance (nano coating, air blast cleaning)
- Simple integration into third-party systems
- Robust housing

Applications

- Environmental monitoring
- Drinking water monitoring
- Industrial applications

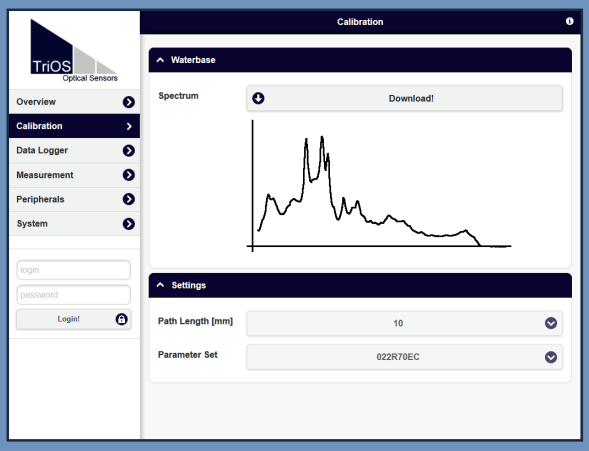
The TriOS G2-Interface

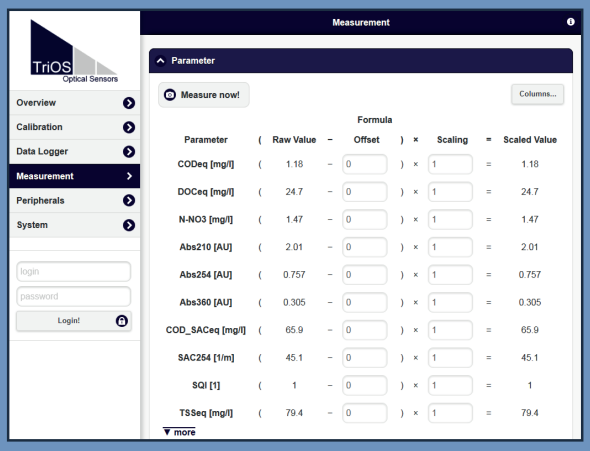
The rapid change in the way we communicate and interact with technology has been evident not only since the ubiquitous spread of smartphones. This development is also having more and more influence on measurement technology. To meet these requirements, TriOS has developed the innovative G2 interface concept which, in addition to a very flexible connection to process control systems and data acquisition systems, also enables intuitive configuration and operation using operating system-independent web browsers.

All G2 sensors are equipped with an internal memory. This enables the storage of all measurement data and events. The easiest way to establish a connection to the G2 sensors is to use the G2 interface box (with or without WiFi module). The box is used for establishing the connection as well as for the power supply and can be used universally for all TriOS G2 sensors.

Three steps into the TriOS G2 interface

1. Connect	
2. Open browser	
3. Enter URL	**http://192.168.77.1/ oder http://OPUS_7063**





FLUOROMETER

enviroFlu

30SXXXXX0

enviroFlu-HC is a new generation of immersion probes for measuring oil-in-water. The measuring principle of UV fluorescence used is far more sensitive than the conventionally used infrared scattering or absorption methods. This makes it possible to determine even the smallest traces of PAHs, e.g. in drinking water, but also in cooling water condensates. The field of application ranges from petrochemistry, leakage detection in cooling and waste water streams to environmental monitoring. The devices can be used stationary in manholes, in the flow or in pipelines, as well as portable, using an optional hand-held measuring device. A new type of coating reduces soiling of the optical measuring windows and thus reduces the required maintenance to a minimum.

Benefits

- without sampling and sample preparation
- without delay
- without reagents
- optical windows with nanocoating
- high sensitivity and selectivity

Applications

- Drinking water
- Waste water
- Airports
- Cooling water
- Flue gas scrubbing
- Refineries
- Pipeline monitoring
- Desalination plants

nanoFlu

30SXXXXX0

nanoFlu fluorometers are low-priced, submersible miniaturized fluorometers for the highly precise, selective measurement of cdom (coloured dissolved organic matter, yellow substances), chlorophyll a, phycocyanin in cyanobacteria, rhodamine or fluorescein. Long-term stability of measurements is ensured by the combination of low power consumption and innovative coating of the optical window, as an energy efficient and environmentally friendly antifouling solution. The devices can be used in diverse applications for the monitoring of sea and river waters, as well as in drinking and wastewater treatment systems. Internal reference signals of the high performance LEDs used for fluorescence excitation compensate ageing effects and temperature influences.

The nanoFlu features the new TriOS G2 interface, allowing fast and easy configuration of sensors by using a web browser. Integration into existing process control systems and external data loggers has never been easier.

Benefits

- High sensitivity
- Nano-coating
- Fast data acquisition
- Electronic light compensation
- Low power consumption

Applications

- Surface water
- Bathing lakes
- Drinking water production and treatment
- Raw water treatment
- Environmental monitoring

Warranty		1 year (EU & US: 2 years)

microFlu V2

37SX0XX1X

microFlu V2 fluorometers are submersible miniature fluorometers for highly precise and selective measurement of tryptophan, cdom, blue-green algae or chlorophyll. The combination of low power consumption and innovative coating of the measurement windows as an energy and environmentally neutral antifouling solution ensures long-term stability of the measurements. The instruments can be used in a wide range of applications for monitoring seawater, river water, drinking water and wastewater. Internal reference measurements of the high-power LED used for fluorescence excitation compensate for aging effects and temperature influences. microFlu V2 is equipped with a RS-485 interface, which enables allows easy and fast sensor configuration via Modbus. Integration into existing process control systems and external data loggers has never been easier.

Benefits

- without delay
- without reagents
- high sensitivity and selectivity
- optical windows with nanocoating
- electronic daylight compensation

Applications

- Surface waters
- Bathing lakes
- Drinking water treatment
- Raw water treatment
- Environmental monitoring

microFlu V2 HC

37SX0XX1X

microFlu V2 HC is a new immersion probe for measuring oil in water. The measuring principle of UV fluorescence used is many times more sensitive and specific than the conventionally used infrared scattering or absorption methods. This makes it possible to determine even the smallest traces of PAHs, e.g. in drinking water, but also in cooling water condensates. The field of application ranges from petrochemistry, leakage detection in cooling and waste water streams to environmental monitoring.

The instruments can be used stationary in manholes or in flow-through, as well as in pipelines. A nano-coating reduces the contamination of the optical measuring windows and thus reduces the required maintenance to a minimum.

microFlu V2 HC is equipped with an RS-485 interface that allows easy and fast sensor configuration via Modbus and also has an analog interface. Integration with existing process control systems and external data loggers has never been easier.

Benefits

- without sampling and sample preparation
- without delay
- without reagents
- high sensitivity and selectivity
- optical windows with nano-coating

Applications

- Surface waters
- Drinking water
- Waste water
- Airports
- Cooling water
- Desalination plants
- Refineries
- Seepage ditch
- Pipeline monitoring
- Bilge water monitoring

RADIOMETER

RAMSES

40SXXX010

RAMSES radiometers are spectral imaging radiometers to measure radiance, irradiance, or scalar irradiance in the UV, VIS and UV/VIS ranges. Thanks to their ultra small size and weight as well as very low power consumption, they are especially suitable for hand-held and autonomous applications. RAMSES radiometers combine precision hyperspectral light measurements with a maximum of flexibility. The modular system increases cost-effectiveness, while the many accessories and special solutions enable a wide range of applications such as installation on ships, handheld usage or autonomous measurements in remote places, like the Arctic or Antarctica.

Benefits

- Extremely low power consumption
- Environmentally robust
- World market leader

Applications

- Water quality
- Photosynthesis
- Satellite validation
- Biology
- Field measurements
- Color measurements
- Climate research

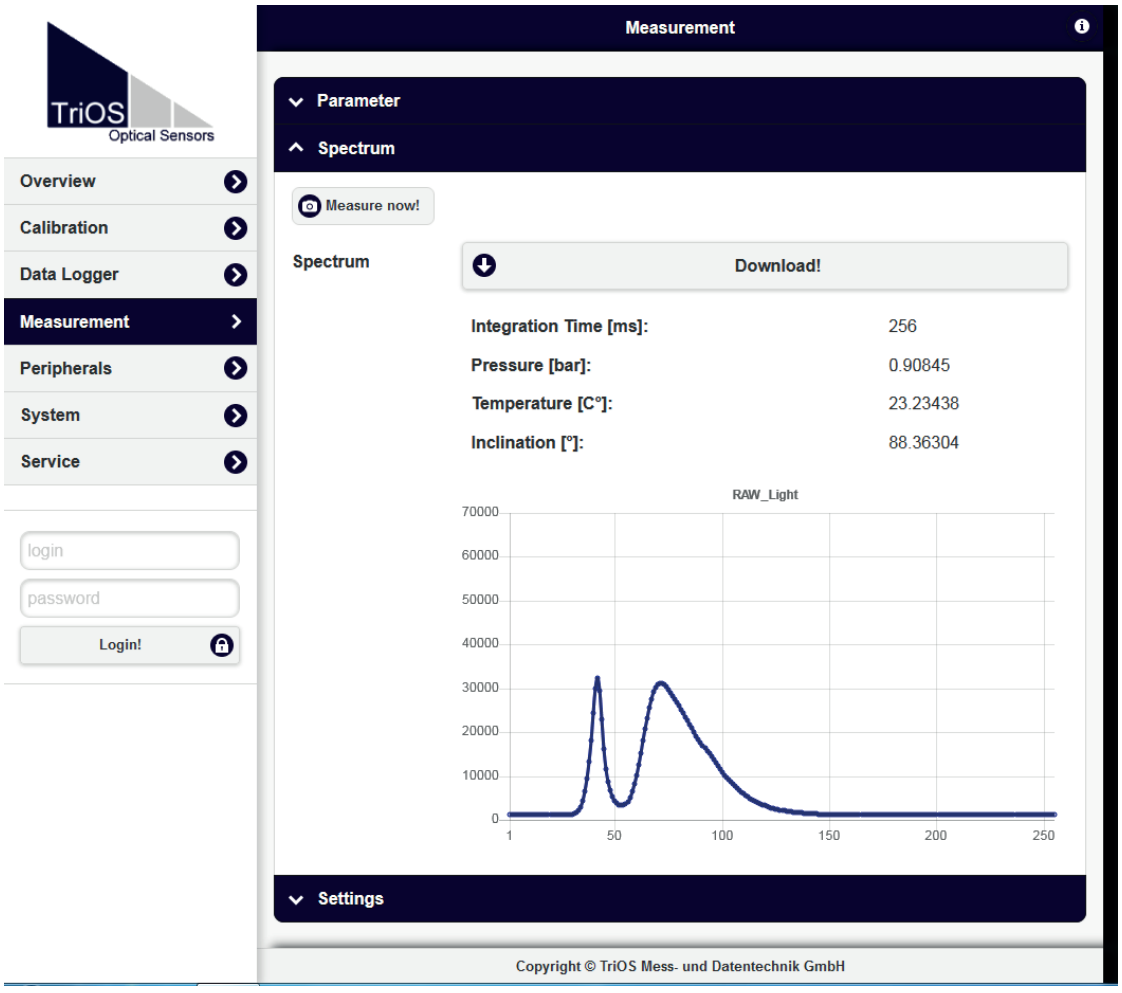
RAMSES G2

40SXXX010

By implementing the G2 extension module, the RAMSES radiometry series now also features the innovative G2 Interface and can now easily be configured by using a web-browser. The internal data logger with 2 GB storage and the comparably low power consumption provides the opportunity for a self-sufficient measurement operation without a separate controller. The addition of the Modbus RTU protocol to the interface simplifies the integration into existing PLCs and external data loggers. Additional to radiance and irradiance, the parameters inclination, pressure and temperature can be retrieved.



eCHEM

pH Sensor TpH

80S1000X0

Robust digital pH sensor for operation on TriBox controllers and. Digital communication ensures safe and trouble-free signal transmission from the sensor to the controller. The high-quality gel pH electrode has a diaphragm and is insensitive to dirt, making the sensor ideal for wastewater applications.

Accessories

Cable: Extension cables of 0.3 m, 2 m, 10 m, 25 m | Controller: TriBox3, TriBox mini | Fittings: FlowCell

Benefits

- High-quality combination electrode with hole diaphragm and polymerised solid electrolyte
- Low maintenance
- Plug and play with TriBox controller

Applications

- Water and wastewater treatment
- Coagulation and flocculation
- Process monitoring and control
- Acid/base neutralization systems

Parameter

Inflow velocity		0...3 m/second	~ 0...10 fps

pH Sensor Differential TpH-D 80S2000X0

Robust, digital differential pH probe for operation with TriBox controllers. The reference system of the pH electrode is separated from the measuring medium due to the closed design. This rules out electrode poisoning. A salt bridge that is insensitive to dirt reduces the amount of cleaning required and prevents dilution of the electrolyte. As a result, the probe achieves a particularly long service life even in heavily contaminated media.

Accessories

Cable: Extension cable 0.3 m, 2 m, 10 m, 25 m | Controller: TriBox3, TriBox mini | Fittings: Flow cell

Benefits

- Communication of measurements via digital
- the differential measurement method enables a longer lifetime of the electrodes
- no moving mechanical parts
- plug and play with TriBox controller

Applications

- difficult measurement of inlets to waste water treatment plants
- Process monitoring and control

Turbidity Sensor TTurb

81SXX00XX

The TTurb is a digital sensor for optical turbidity measurement using the 90° IR scattered light method. Depending on the sensor design it can be used in pure water up to 100 FNU as well as in raw water, waste water and process water up to 1000 FNU. TTurb is available with different cable lengths (10 m or 2 m) as well as in different versions.

As an immersion sensor, the TTurb can be used directly in the measuring medium, but is also available in the FlowCell-optimized version directly with a flow cell for bypass applications. In addition, it is possible to obtain the TTurb directly in a set with the dry-standard TTurbCAL. This standard is always directly adapted to each individual instrument and thus enables precise function tests directly on site, without any reagents.

Benefits

- Reliable concentration measurements by optical methods
- Pulsed infrared scattered light procedure
- No mechanically moving parts
- Digital reading

Applications

- Measurement of turbidity in drinking water, domestic water, circulating water
- Measurement of turbidity in drinking water treatment plants with low turbidity values
- Measurement of turbidity in open waters

Inflow velocity		maximum 0.1 m/second	maximum ~ 0.33 fps

The sensor meets requirements of DIN EN ISO 7027-1:2016-11.

Conductivity Sensor

90S4301X0

Digital sensor to measure conductive conductivity especially in pure media, for operation on TriBox controllers. The digital technology ensures secure and interference-free signal transmission from the sensor to the controller.

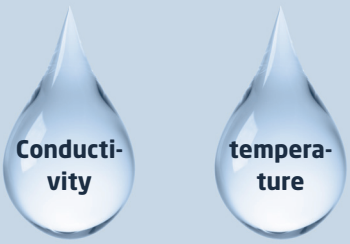
Benefits

- Reliable conductivity measurement with two conductive graphite electrodes and temperature compensation
- PVC sensor housing and graphite electrodes
- No mechanically moving parts
- Immediate installation and easy maintenance

Applications

- Measurement of conductivity in the outflow of wastewater treatment plants
- Measurement of conductivity in industrial and water circuits

Parameter



Technical Specifications

Measurement technology	Conductivity	
Measurement principle	Conductivity with two graphite electrodes	
Parameters	Conductivity	
Measurement range	0.00 µS… 20000 µS	
Measurement accuracy	±0.5 µS at 20 µS ± 5 µS at 200 µS ± 50 µS at 2000 µS ± 500 µS at 20000 µS	
Response time	T90 < 60s	
Temperature compensation	Via NTC	
Housing material	PVC housing, graphite electrodes	
Dimensions (L x Ø)	220 mm x 33 mm	~ 8.7“ x 1.3“
Interface	RS-485 Modbus RTU	
Power supply	12…24 VDC	
Connection	8-pin M12 connector, cable length 2 m or 10 m	
Maintenance interval	2 years	
System compatibility	Modbus RTU	
Warranty	1 year (EU & US: 2 years) on electronics; wear parts are excluded from the warranty	
Process pressure	10 bar	~ 145 psig
Calibration method	One-point calibration with standard measuring solution	
Process temperature	0…50°C	~ +32 °F to +122 °F

Conductivity Inductive

90S4401X0

The inductive conductivity sensor has 2 toroidal coils which are housed in a plastic casing and therefore do not come into contact with the surrounding solution. For this reason, it is physically impossible for the sensor surface to become soiled, coated or contaminated.

Since the inductive conductivity sensor does not determine the conductivity via electrodes, but via electrical fields, no polarization effects occur. Thus the sensor provides more accurate measurement results, especially for measurement media with high conductivities.

The sensor housing is made of Noryl, which is extremely resistant to chemicals.

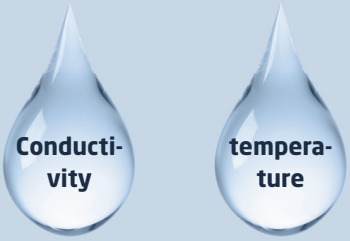
Benefits

- No contamination, coating or pollution of the sensor surface
- No polarization effects
- Low maintenance requirement

Anwendungen

- Waste Water

Parameter



Technical Specifications

Measurement technology		Change of inductance
Measurement principle		Change of inductance with two toroidal coils
Parameter		Conductivity
Measuring range		0.5 mS/cm – 2000 mS/cm
Measurement accuracy		± (2% + 20 µS/cm)
Drift		0.1 % / Year
Turbidity compensation		No
Temperature compensation		Via NTC
Data Logger		No
Response time		T90, depending on equilibrium
Measurement interval		10 seconds
Material	Housing	Noryl
Dimensions (L x Ø)		119 mm x 52 mm
Weight		0.1 kg
Interface		RS-485 Modbus RTU (Baud rate = 9600)
Power consumption		< 75 mW
Power supply		7 – 40 VDC
Connection		8-pin M12 connector
Maintenance effort		≤ 0.5 h/month typical
Maintenance interval		24 Months
Calibration method		Two-point calibration in air and with standard measuring solution during initial installation, followed by validation
System compatibility		Modbus RTU
Warranty		1 year, EU & USA: 2 years
Max. pressure	With fixed cable	10 bar
Protection type		IP68
Temperature	Sample	-10 °C ... +70 °C (max. 85 °C)
	Ambient	-10 °C ... +70 °C (max. 85 °C)
	Storage	-20 °C ... +80 °C
Inflow velocity		Max. 3 m/s, Steady and constant flow

Dissolved Oxygen Sensor

90S53X1X0

The oxygen sensor uses luminescence-based optical measurement technology and measures reliably and precisely. The low maintenance and small amount of consumable materials needed by the sensor provide immediate returns on investment. Only the membrane cap must be replaced every two years. The sensor can also be used in applications with a very weak water flow. The oxygen sensor is available with a 10-meter or a 2-meter cable.

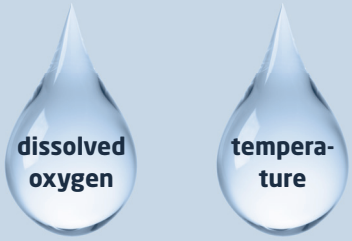
Benefits

- Low operation costs thanks to low maintenance (no electrolyte replacement)
- Larger calibration interval thanks to low deviations
- No polarisation voltage necessary
- Fast response time

Applications

- Measurement of dissolved oxygen in surface water, aquaculture, seawater and drinking water and wastewater plants

Parameter



Technical Specifications

Measurement principle		Luminescence	
Parameters		Dissolved oxygen	
Measurement range		0...20 mg/L 0...20 ppm 0...200 %	
Measurement accuracy		± 0.1 mg/L ± 0.1 ppm ± 1 %	
Resolution		0.01	
Reaction time		90% of the value in less than 60 seconds	
Measurement interval		> 5 s	
Inflow velocity		No movement necessary	
Temperature compensation		Via NTC (compensation active for temperatures below 0 °C)	
Measurement range (temperature)		0...+50 °C	
Resolution (temperature)		0.01 °C	
Accuracy (temperature)		0.5 °C	
Membrane cap		No cross-sensitivity with: pH 1...14 ; CO_2, H_2S, SO_2 Cross-sensitivity with organic solvents such as acetone, toluene, chloroform dichloromethane (methylene chloride) or chlorine gas	
Material		Standard version with passivated stainless steel (316L) housing, cap and screws; For seawater applications with titanium housing, cap and screws Cable: polyurethane casing; Cable grommet: polyamide Patch with active substance (black) - membrane: silicon for optical insulation	
Dimensions (L x Ø)		146 mm x 25 mm	~ 5.7″ x 1″
Weight	stainless steel	~ 450 g	~ 1 lbs
	titanium	~ 300 g	~ 0.7 lbs
Interface		RS-485 (Modbus RTU)	
Power consumption		1 W	
Power supply		12 V (± 10 %)	
Sensor cable		2 m and 10 m	~ 6.6 ft and ~ 32.8 ft
Calibration/maintenance interval		2 years	
Warranty		1 year (EU & US: 2 years) on electronics; wear parts are excluded from the warranty	
Max. pressure		5 bar	~ 72.5 psig
Protection type		IP 68	NEMA 6P
Sample temperature		0...+50 °C	~ +32 °F... +122 °F
Ambient temperature		0...+50 °C	~ +32 °F... +122 °F
Storage temperature		-10...+60 °C	~ +14 °F... +140 °F

Free Clorine Sensor

90S21000X

The chlorine sensor from the eCHEM sensors product range is an electrochemical sensor for measuring the chlorine concentration in water. This sensor detects free chlorine from inorganic chlorine products (chlorine gas, hypochlorite, etc.). The measuring method has a reduced pH dependency, so that pH fluctuations only have a limited impact on the measurement signal. pH value increases only lead to an approximately 10% reduction of the measuring signal per pH unit.

Benefits

- Stable signals even with fluctuating pH values
- Abrasive particles are tolerated
- Surfactants are partially tolerated

Applications

- Swimming pools, drinking water, seawater

Parameter

Technical Specifications

Measurement technology	Membrane-covered, amperometric potentiostatic 3-electrode system	
Measurement principle	Amperometry	
Parameters	Free chlorine with reduced pH dependency	
Measurement range	0...2 mg/L, 0...20 mg/L	
Accuracy	Measuring range 2 mg/L: at 0.4 mg/L & 1.6 mg/L < 1% Measuring range 20 mg/L: at 4 mg/L < 1% at 16 mg/L< 3 %	
Response time	T90: approx. 2 min	
Running-in period	Approx. 2 h prior to initial operation	
Drift	approx. -1 % per month	
Temperature compensation	Automatic through integrated temperature sensor; Temperature jumps must be avoided	
Housing material	Micro-porous hydrophilic membrane, UPVC, stainless steel 1.4571	
Dimensions (L x Ø)	Approx. 205 mm x approx. 25 mm	~ 8.1” x 1”
Interface	RS-485, Modbus RTU	
Power supply	9...30 VDC	
Connection	8-pin M12 plug	
Maintenance interval	typically once per week	
System compatibility	Modbus RTU	
Warranty	1 year (EU & US: 2 years) on electronics; wear parts are excluded from the warranty	
Process pressure	1 bar, no pressure shocks or vibrations, with retaining ring	~ 14.5 psig
Calibration method	Determination of chlorine with DPD-1 method	
Process temperature	0...+45 °C (no ice crystals in the test water)	~ +32 °F... +113 °F
Flow rate	Approx. 15...30 L/h in FLC-3, minimum flow dependence exists	
pH range	pH 4...pH 9, reduced pH dependence	
Conductivity	10 µS/cm...50 mS/cm (sea water)	
Cross influences	Combined chlorine increases measured value	

Chlorine Dioxide Sensor

90SX20000

The chlorine dioxide sensor from the eCHEM sensors product range is an electrochemical sensor for measuring the chlorine dioxide concentration in water. The range of application of the sensor covers almost all water qualities and treatments (e.g. bottle washing machine, CIP system, rinser). It can also be used in seawater. Thanks to a special membrane system, the sensor is particularly resistant to chemicals and surfactants.

Benefits

- Surfactants are partially tolerated
- Abrasive particles are tolerated
- Higher temperatures are possible

Applications

- All types of water treatment

Parameter

Technical Specifications

Measurement technology	Membrane-covered, amperometric 2-electrode system	
Measurement principle	Amperometry	
Parameters	Chlorine Dioxide	
Measurement range	0...2 mg/L, 0...20 mg/L	
Accuracy	Measuring range 2 mg/L: at 0.4 mg/L & 1.6 mg/L < 1 % Measuring range 20 mg/L: at 1.5 mg/L < 0.1 %	
Response time	T90: approx. 1 min	
Running-in period	Approx. 2 h prior to initial operation	
Drift	Approx. -1 % per month	
Temperature compensation	Automatic through integrated temperature sensor; Temperature jumps must be avoided	
Housing material	Micro-porous hydrophilic membrane, UPVC, stainless steel 1.4571	
Dimensions (L x Ø)	Approx. 205 mm x approx. 25 mm	~ 8.1” x 1”
Interface	RS-485, Modbus RTU	
Power supply	9...30 VDC, max. 56 mA	
Connection	8-pin M12 plug	
Maintenance interval	typically once a week measuring signal check, membrane cap change & electrolyte change depending on application	
System compatibility	Modbus RTU	
Warranty	1 year (EU & US: 2 years) on electronics; wear parts are excluded from the warranty	
Process pressure	1 bar, no pressure shocks or vibrations, operation with retaining ring	~ 14.5 psig
Calibration method	Determination of chlorine with DPD-1 method	
Process temperature	0...+50 °C (no ice crystals in the test water)	~ +32 °F...+122 °F
Flow rate	Approx. 15...30 L/h in FLC-3, minimum flow dependence exists	
pH range	pH 1...pH 12, reduced pH dependence	
Conductivity	10 µS/cm...50 mS/cm (sea water)	
Cross influences	Cl2 does not interfere; O3: factor 25	

Total Chlorine Sensor

90SX30000

The chlorine sensor from the eCHEM sensor product range is an electrochemical sensor for measuring the chlorine concentration in water. The sensor measures the concentration of total chlorine in a sample created by adding inorganic chlorine products (e.g. chlorine gas, sodium hypochlorite solution, calicium hypochlorite solution). The measuring method has a reduced pH dependency, so that pH value fluctuations only have a minor influence on the measuring signal. By regularly replacing the electrolyte and the membrane cap, the sensor performance can be guaranteed and ensured over a longer period of time.

Benefits

- Stable signals even with variable pH values
- Surfactants are partially tolerated

Applications

- Swimming pools, drinking water, seawater, brine water (15% NaCl)

Parameter

Technical Specifications

Measurement technology	Membrane-covered, amperometric potentiostatic 3-electrode system
Measuring principle	Amperometry
Parameter	Total chlorine (free chlorine + combined chlorine) with reduced pH dependence
Measurement range	0...2 mg/L; 0...20 mg/L
Accuracy*	Measuring range 2 mg/L: <2% at 0.4 mg/L and 1.6 mg/L Measuring range 20 mg/L: <1% at 4 mg/L and <3% at 16 mg/L
Application	Swimming pools, drinking water, seawater, brine water (15% NaCl), Surfactants are partially tolerated
Suitable chlorinating agents	Inorganic chlorine compounds: NaOCl (=chlorine bleach), Ca(OCl)2, chlorine gas, electrolytically produced chlorine
Resolution	Measuring range 2 mg/L: 0.001 mg/L Measuring range 20 mg/L: 0.01 mg/L
Response time	T90: approx. 3 minutes (brine water approx. 5 minutes)
Running-in time	Approx. 2 hours for initial start-up
Slope drift	approx. -1 % per month
Temperature compensation	Automatically, through an integrated temperature sensor, temperature jumps are to be avoided
pH range	pH 4 - pH 12, with reduced pH dependence
Conductivity	10 µS/cm - 200 µS/cm (brine water)
Zero point determination	Not necessary
Slope calibration	On the unit by analytical chlorine determination, DPD-4 method (DPD-1 + DPD-3)
Cross-sensitivities	ClO2: factor 1; O3: factor 1.3; Corrosion inhibitors and water hardness stabilisers can cause measurement errors.
Absence of the disinfectant	Max. 24 hours
Material	Microporous hydrophilic membrane, PVC-U, PEEK, stainless steel (1.4571)
Dimensions (L x Ø)	approx. 205 mm x 25 mm
Weight	1.1 kg
Interface	RS-485, Modbus RTU
Power supply / electronics**	9 - 30 VDC, approx. 56 - 20 mA
Connection	8-pin M12 connector
Maintenance effort	Weekly control of the measuring signal recommended Depending on the water quality, the membrane cap and the electrolyte should be replaced once a year
System compatibility	Modbus RTU
Warranty	1 year (EU & USA: 2 years) on electronics; Wear parts are excluded from the warranty

Max. Pressure		3 bar, no pressure surges and/or vibrations, with circlip
Inflow velocity		approx.15 - 30 l/h in FlowCell
Temperature	Transport	+5...+50 °C (sensor, electrolyte, membrane cap)
	Sample	0...+45 °C (there must be no ice crystals in the measuring water)
	Ambient	0…+55 °C
Storage	Sensor	can be stored dry and without electrolyte for an unlimited period at +5...+40 °C
	Electrolyte	in original container in the dark at +5...+ 35 °C one year (after production, please note expiry date)
	Membrane cap	Can be stored in original packaging for an unlimited period at +4...+40°C (used caps cannot be stored).

* After calibration at repeat conditions (25 °C, pH 7.2 in drinking water) from full scale value

** Electronics is completely electrically isolated; digital internal measured value processing

CONTROLLER

TriBox3

10C000000

TriBox3 is a measurement and control system for all TriOS sensors. The unit offers 4 sensor channels with selectable RS-232 or RS-485 interface. In addition to Modbus-RTU, various other protocols are available. A built-in valve allows the use of a compressed air purge for the sensors. In addition, the TriBox3 offers various interfaces, including an IEEE 802.3 Ethernet interface, an IEEE 802.11 b/g/n interface, a USB connection and 6 analogue outputs (4...20 mA). An integrated relay can be used to trigger alarms or control external devices. Low power consumption, a robust aluminium housing and a range of interfaces make the TriBox3 ideal for all applications in environmental monitoring, drinking water, waste water treatment plants and many other areas.

Benefits

- open Modbus RTU communication
- for all digital TriOS sensors
- cost-effective alternative to analogue measuring points
- integrated data logger with service logbook
- WiFi for communication
- USB interface
- TCP/IP interface
- Modbus RTU server
- also available without WiFi

Technical Specifications

Voltage supply	100...240 VAC, 50...60 Hz, 12...24 VDC (± 5%)
Power consumption	Type: 6 W, max: 50 W
Protection class	1
Overvoltage category	II
Connection	4 M12 industrial connectors for TriOS sensors
Standard	RS-232, RS-485
Protocol	Modbus-RTU, TriOS
Server RTU	yes (on each sensor connector)
Client RTU	yes (on each sensor connector)
Parameters	Adjustable (default: 9600-8-N-1)

Server TCP	yes	
TCP port	Adjustable (default: 502)	
Standard	Ethernet, WiFi based on IEEE 802.11b/g/n	
Connection	1 RJ-45 integrated WiFi antenna (for TriBox3 with WiFi)	
Protocol	TCP/IP, Modbus TCP, VNC	
Web interface	no	
USB	USB 2.0 (Host), USB-A socket	
Analog Output	6 analogue outputs, configurable: 4...20 mA	
Load	max. 500 Ω	
Connection terminals	1.5 mm²	16 AWG
Error indicator	0 mA	
Measurement trigger	Trigger for global measurement (galvanically isolated),	
	Control voltage: 12...24 VDC (± 5%) Connection terminal: 1.5 mm² (AWG 16)	Control voltage: 12...24 VDC (± 5%) Connection terminal: AWG 16
Control voltage	no	
Electrical specification	1 x relay changeover contact (SPDT) / 250 VAC, 2 A / 30 VDC, 2 A	
Connection terminals	max. 2.5 mm²	max. 14 AWG
Valve	integrated, max. air pressure: 5 bar	
Display	7” capacitive touch-display (800x480 pixels)	
LED	5 status LEDs	
Storage medium	internal 2 GB microSD card, direct logging to USB stick possible.	
Data Export	via USB 2.0 Host	
Operating temperature	-10...+50 (with pre-installed mains power cable +5...+40 °C)	~ +14 ˚F to +122 ˚F (with pre-installed mains power cable +41...+104 ˚F)
Storage temperature	-20...+70 °C	~ -4 ˚F to +158 ˚F
Relative air humidity	0...95 % (not condensing)	
Protection type	IP65	NEMA 4X
Pollution level	2	
Dimensions (width x height x depth)	280 x 170 x 94 mm	~ 11” x 6.7” x 3.7”
Weight	3.7 kg	~ 8.2 lbs
Materials	Housing: aluminium die-cast alloy, front panel: acrylic glass (PMMA)	

TriBox mini / NET

20C000000 & 20C100000

Digital 2-channel controller with 2 digital sensor inputs and two 4...20 mA outputs. The digital 2-channel controller is compatible with all digital TriOS sensors.

All of the measured values and diagnostics data that are saved can be selected using an integrated web browser.

Benefits

- Open Modbus RTU communicationfür alle digitalen TriOS-Sensoren
- For all digital TriOS sensors with Modbus communication
- Low-cost alternative to analogue measuring points
- Integrated data logger with service logbook
- optianal WiFi for communication via web browser

Technical Specifications

Voltage supply	100...240 VAC, 50...60 Hz, 10...15 VDC
Power consumption	Typ: 2 W, max.: 40 W
Connection	2 M12 industrial connectors for TriOS sensors
Standard	RS-232, RS-485
Protocol	Modbus RTU, TriOS
Server RTU	no
Client RTU	yes (on each sensor connector)
Parameters	Adjustable (default: 9600-8-N-1)

Technical Specifications

Standard	**TB mini**	WiFi based on IEEE 802.11b/g/n

Storage temperature		-20...+70 °C	~ -4 °F to +158 °F
Relative air humidity		0...95 % (non-condensing)	
Protection type		IP65 (the network cable has a lower protection class)	NEMA 4X (the network cable has a lower protection class)
Dimensions (width x height x depth)		150 x 139 x 80 mm	~ 5.9” x 5.5” x 3.2”
Weight		1.6 kg	~ 3.5 lbs
Materials		Housing: Aluminium die-cast alloy Front panel: acrylic glass (PMMA)	

DRY STANDARDS

SolidCAL

20AXX000X

The SolidCAL solid secondary standard enables fast function and calibration checks of the TriOS enviroFlu-HC fluorometer for PAH detection. The simple use of the standard ensures fast, accurate device verification, even on site. A standard is available for each TriOS fluorometer – for enviroFlu HC also in different concentrations. In addition to the standard, the SolidCAL kit includes a cleaning fluid and carrier.

Technical Specifications

Measurement principle	Fluorescence
Parameters	Polycyclic aromatic hydrocarbons (PAHs)
Variants	HC2 for enviroFlu-HC 500 HC3 for enviroFlu-HC 5000
Accuracy	+/- 20 % (of the respective SolidCAL HC concentration)
Housing material	Polyoxymethylene (POM)
Dimensions (H x Ø)	40 mm x 50 mm
Weight	100 g
Calibration / maintenance interval	After 10h (180 checks)
Warranty	1 year (EU: 2 years)
Recommended ambient temperature during use	+ 20 °C
Storage temperature	+ 2 … + 25 °C in the dark

FieldCAL

20A210003

The FieldCAL secondary standard enables reliable calibration and function tests of RAMSES radiometers in the field. Thanks to the special design, radiance (ARC), as well as irradiance (ACC) sensors can be checked. An adapter used for radiance sensors is included in the set. Small dimensions and a sturdy transport box make FieldCAL a useful tool for light measurements in the field.

Technical Specifications

Wavelength range	430...730 nm	
Light source	White LED with spherical diffuser	
Stability	Type Better than 1% after 1 minute	
Battery	4 AA (not rechargeable)	
Operating time	Type 50 hours per battery charge	
Material	POM, seawater-resistant plastic	
Dimensions (ØxL)	50 mm x 140 mm 50/60 mm x 182 mm (with ACC Adapter)	~ 2" x 5.5" ~ 2/2.4" x 7.2" (with ACC Adapter)

DryCAL

20A100008

DryCAL enables high-precision validation of the corresponding enviroFlu sensor. Every DryCAL corresponds precisely to a certain sensor and is calibrated to its specific properties, which significantly increases the precision of the calibration.

The DryCAL is sold as a set with two dry calibration standards.

Technical Specifications

Measurement principle	Fluorescence	
Parameter	polycyclic aromatic hydrocarbons (PAH)	
Set	DryCAL-0; DryCAL-1	
Housing Material	Polyoxymethylene (POM)	
Dimensions (HxØ)	40 mm x 50 mm	~ 1.6“ x 2“
Weight	104 g	~ 0.2 lbs
Application Interval	4 weeks	
Calibration- / Maintenance interval	4-5 years, send in together with the assigned sensor	
Warranty	1 year (EU & US: 2 years)	
Recommended ambient temperature for use	+ 20 °C	~ +68 °F
Storage Temperature	+2 … +25 °C in darkness	~ +35.6 °F...+77 °F

TTurbCAL

20A100007

The TTurbCAL is a solid matter standard, which provides an FNU value for reagent-free calibration of TriOS TTurb sensors. The standard is very easy to use and makes device calibration on site much easier.

Technical Specifications

Measurement principle	Nephelometry	
Parameter	Turbidity FNU / NTU	
Housing Material	PET	
Dimensions (HxØ)	110 mm x 50 mm	~ 4.3“ x 2“
Weight	225 g	~ 0.5 lbs
Calibration- / Maintenance interval	4-5 years, Send in with the paired sensor	
Warranty	1 year (EU & US: 2 years)	
Recommended ambient temperature for use	+ 20 °C	~ +68 °F
Storage Temperature	+2 … +25 °C in darkness	~ +35.6 °F...+77 °F

ACCESSORIES

G2 InterfaceBox

11CX00000

The G2 InterfaceBox is available in variants with and without WiFi. G2 sensors from TriOS Mess- und Datentechnik GmbH can be configured and controlled via the interface box. This is enabled by the web interface of the G2 sensors, which can be accessed via a WiFi or LAN connection. The web interface can be accessed with any browser.

Technical Specifications

Voltage supply	24 VDC (± 10 %)	
Power consumption	≤ 1.5 W plus sensor (only the WiFi variant)	
Connection	1 M12-plug for TriOS G2 sensors	
Standard	IEEE 802.3	
Protocol	Web interface (only with G2 sensors)	
Analog interfaces	no	
Switch input/output	no	
Standard	IEEE 802.3, IEEE 802.11 b/g/n (only the WiFi variant)	
Connection	1 RJ-45 external WiFi antenna (SMA) (only the WiFi variant)	
Protocol	TCP/IP (only with G2 sensors)	
Web interface	no	
USB	no	
Data storage	no	
Operating temperature	0...+40 °C	~ +32 °F to +104 °F
Storage temperature	-20...+70 °C	~ -4 °F to +158 °F
Relative air humidity	0...95 % (non-condensing)	
Protection type	IP20	NEMA 1
Dimensions (width x height x depth)	60 x 35 x 126 mm / 60 x 35 x 162 mm	~ 2.4″ x 1.3″ x 5″ / ~ 2.4″ x 1.3″ x 6.4″

TTrig

12C100000

TTrig is a measurement interval switch for the TriOS G2 sensors OPUS and NICO. Due to its low standby power (<1 mW), it is ideally suited for operation with a battery as power supply. It is designed to minimize energy consumption between measurements.

The TTrig features an additional connection for commissioning and controlling a wiper (W55).

Remote or self-sufficient measuring stations can thus be operated maintenance-free for several months.

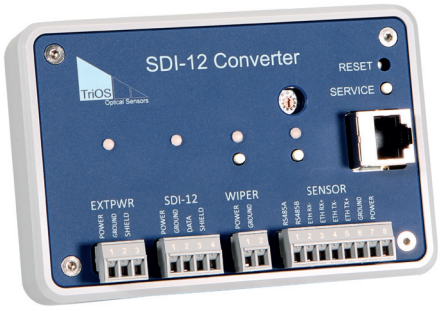
An RJ-45 Ethernet interface provides access to the sensor's G2 web interface for downloading the measurement data from the data logger with a notebook.

Technical Specifications

Voltage supply	12...24 VDC, max. 4A
Power in standby	<1mW
Connection	M12 for TriOS G2 sensors; 1x RJ-45
Standard	RS-485
Protocol	Modbus RTU
Analog interfaces	No
Connection	1x M8 connector for wiper W55 Trigger output
Operating temperature	0...+40 °C
Storage temperature	-10...+70 °C
Relative air humidity	0...95 % (non-condensing)
Protection type	IP64
Dimensions (width x height x depth)	140 x 80 x 60 mm
Weight	0.5 kg

SDI-12 Converter

11C100001



The SDI-12 converter translates the Modbus protocol used by TriOS sensors into SDI-12 and thus serves as an interface between the sensors and the SDI-12 interface of the peripherals.

The SDI-12 converter translates the Modbus protocol used by TriOS sensors into SDI-12 and thus serves as an interface between the sensors and the SDI-12 interface of the peripherals. Due to its low standby power (< 20 mW) it is perfectly suited for operation with a battery as power supply. Four status LEDs inform the user continuously about the current operation mode and power supply. Both, measurements with G2 sensors and wiper cleaning cycles can be controlled via the converter. The implemented Ethernet interface allows data export and sensor configuration via the web interface.

With three manual buttons Sensor Scan, Wiper Cleaning and Service Mode can be activated. The position of the rotary encoder determines the sensor address via which the sensor is addressed.

Technical Specifications

External power supply	Power supply	12…24 VDC (± 10 %)	
	Connection terminal	1.5 mm² (AWG 16)	
SDI-12 Interface	Power supply	10…24 VDC (± 10 %)	
	Power consumption in standby	< 20 mW	
	Protocol	SDI-12	
Wiper Interface	Connection terminal	1.5 mm² (AWG 16)	
	Standard	W55 Wiper	
Sensor Interface	Connection terminal	1.5 mm² (AWG 16)	
	Standard	RS485	
	Protocol	Modbus RTU	
Network*	Standard	Ethernet	
	Connection	RJ45	
Operating temperature		-10…+40 °C	~ 14 ˚F to +104 °F
Storage temperature		-10…+70 °C	~ 14 ˚F to 158 ˚F
Relative air humidity		0…95 % (non-condensing)	
Protection type		IP30	NEMA 1

* Only available if the connected sensor has an Ethernet interface.

LED	4x RGB Status LED	
Housing material	PVC, Perspex	
Dimensions (L x W x H)	120 x 80 x 45mm	~ 4.7” x 3.2” x 1.8”
Weight	250 g	~ 0.6 lbs
System compatibility	SDI-12	
Warranty	1 Year (EU & US: 2 Years)	

FC68 FlowCell for enviroFlu 10A100003

The FlowCell FC68 is used for bypass installation of the enviroFlu. The measurement medium is directed through the cell, making measurement without a reagent on land possible.

FC48 FlowCell for enviroFlu 10A10000X

The FlowCell FC48 is used for bypass installations of the TriOS enviroFlu with a diameter of 48 mm.

FC48 FlowCell for Photometer

10A10000X

The FlowCell FC48 is used for bypass installations of the TriOS Photometer with a diameter of 48 mm. Different path lengths are available.

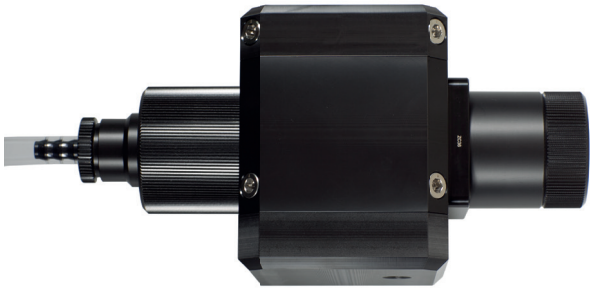
FlowCell for eCHEM Sensors

10A0X0000

The specially developed FlowCell for the eCHEM series is based on a simple, clever system. The side and base pieces of the FlowCell can be detached easily with only one turn and new modules can be added. The sensor-specific adapter pieces can also be replaced easily. Only the black attachment element is needed to attach it to the wall. The FlowCell can then simply be placed in front and attached with a bolt.

The system is designed to be modular, which means that every extension can be ordered individually and customized according to the application. This gives you complete freedom in the design of your application and you can adapt the system in just a few simple steps. The eCHEM FlowCell system is compatible with the FlowCell for turbidity.

FlowCell for nanoFlu 10A090000



FlowCell for Turbiditysensors 10A050000

A specialized FlowCell was developed for the sensors of the turbidity series to minimise reflections. This design maximises the precision of the measurements. This FlowCell is compatible with the FlowCell for eCHEM sensors and the nanoFlu FlowCell.

Sedimenter

02A100011

The sedimenter is a flow-through device for use in turbid water. The sample is passed through the sedimenter without pre-filtering. The sensor can also be installed in the sedimenter equipped with a wiper.

Suitable for OPUS, NICO, enviroFlu & microFlu. Version for LISA, LISA color and VIPER on request.

Technical Specifications

Measuring device	Suitable for OPUS, NICO, enviroFlu & microFlu with and without wiper. Version for LISA, LISA color and VIPER on request.
Pressure range	Unpressurised, open drain
Material	PVC
Dimensions	Installation plate for wall mounting: 800 mm x 495 mm
Weight	Sediment incl, wall plate only: 14.7 kg

Wiper W55 V2

02A100008 • 02A100X18

Der TriOS Wischer W55 V2 bietet eine zusätzliche Reinigungsoption für alle TriOS Photometer mit Pfadlängen von 1 mm bis zu 10 mm. Das Wischergehäuse kann in wenigen Schritten am Sensor montiert werden und bietet eine zuverlässige Reinigung der Messfenster. Die neue Magnetsicherung der Achse erlaubt einen schnellen und leichten Wischerblattwechsel, ganz ohne Werkzeug.

Die neue Version des Wischers verfügt nun über eine Blockierungserkennung und -beseitigung und einen Service-Modus, der durch regelmäßige Anwendung die Lebensdauer des Wischers erhöht. Das Zubehörteil kann zudem auch in Seewasser bis zu einer Tiefe von 10m eingesetzt werden.

Technical Specifications

Path lengths	1 mm, 2 mm, 5 mm, 10 mm
Control port	4-pin M8-plug A suitable M8 connection cable with open end is included in the scope of delivery.
Trigger input	5 – 24 VDC (±10%)
Power consumption trigger input	2...15 mA
Operating time (max.)	3 Seconds
Dimensions L x Ø	175 mm x 80 mm
Weight	0.52 kg
Material	NBR, POM, TPE (PP, EPDM), Titanium, V4A
Power supply	12 – 24 VDC (± 10 %)
Power consumption	approx. 2 – 6 W in operation; max. 0.75 W in standby
Maintenance effort	≤ 0.5 h/month typical
Maintenance interval	depending on application
Warranty	1 year (EU & USA : 2 years)
Max. Pressure	1 bar
Protection Type	IP68
Inflow velocity	up to 10 m/s
Operating temperature	+2...+40 °C
Storage temperature	-10 °C...+70 °C

AirShot2

02A100010

The compact pressured air cleaning system AirShot2 works with pressured air pulses instead of a continuous air flow, thus reducing the required amount of air significantly and enabling a very compact design.

Furthermore the pressure pulses perform a more effective cleaning than continuous air flow systems, making the AirShot2 a valuable addition to every system. AirShot2 can be used as an alternative to a standard compressor and can be operated with a TriBox3.

The cleaning process of the AirShot2 requires only 10 seconds. It can be triggered at a minimum interval of 5 minutes.

Technical Specifications

Voltage supply	**230 V Version**	230 VAC, max. 200 W, 0.86 A
	110 V Version	110 VAC, max. 200 W, 1.8 A
Connection		for 6 mm hoses (4 mm inner diameter)
Power cable length		3 m
Control line length		5 m
Trigger Input		12...24 VDC, M8 4-Pin
Wiper Output		M8 4-Pin
LED		3 x Status LED
Temperature Impulse Box		-5...+40 °C
Temperature Compressor		-10...+40 °C
Protection type		IP44
Size w/h/d		190 x 260 x 125 mm and 90 x Ø46 mm
Weight		4.4 kg
Housing		Polycarbonate
Standard		10 s every 5 min
Max. Pressure		7 bar

Solenoid Valve V2 for TriBox mini 03A000003

The TriBox mini supports operation of an external, controllable valve for the purposes of water or compressed-air cleaning. All Solenoid Valve V2 settings can be configured via the TriBox mini menu („Measurement & Cleaning“, sub-item „Cleaning“).

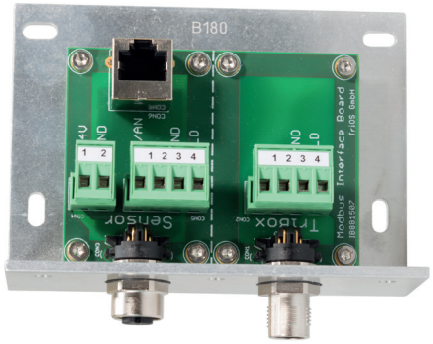
The Solenoid Valve V2 can be installed very easily. It has four 5.3 mm holes for installation.

Technical Specifications

Dimensions	110 x 97 x 55 mm	~ 4.3" x 3.8" x 2.2"
Weight	~ 0.6 kg	~ 1.3 lbs
Max. pressure	5 bar	~ 72.5 psig
Voltage supply	12 VDC	
Power consumption	3 W	
Connection	for 6 mm hoses (4 mm inner diameter)	for ~0.23" hoses (~0.16" inner diameter)
Housing	Die-cast aluminium alloy	
Protection type	IP65	NEMA 4X
Cables	1.5 m connector cable with M8 plug	~ 4.9 ft connector cable with M8 plug
Temperature	2...+40 °C	~ 35.6 ˚F to +104 ˚F

Modbus Interface Board

07A000000



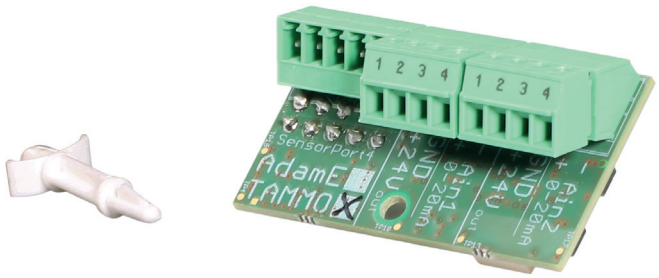
The Modbus interface controls the sensor interfaces of the TriBox3, TriBox Mini or the TriOS G2 sensors with connectors, providing simple, flexible connection options. The TriBox is connected via a standard M12 extension cable. TriOS G2 sensors with M12 connectors can be connected directly. To operate the sensors, a power supply must be connected to the interface, which is connected directly to the sensor. Additional mounting holes in the aluminium L profile make installation easy.

Technical Specifications

Voltage supply	12…24 VDC (+/- 10%), only required for operation with sensors 2 pin PCB plug connector	
G2 sensor connector	1 M12 built-in socket	
G2 sensor serial tap	4 pin PCB plug connector	
G2 sensor network tap	1 RJ-45 socket, standard: IEEE 802.3i (10BaseT)	
TriBox connection	1 M12 built-in plug, connection via standard M12 extension	
TriBox serial tap	4 pin PCB plug connector	
Operating temperature	0...+40 °C	~ +32 °F to +104 °F
Storage temperature	-20...+70 °C	~ -4 °F to +158 °F
Relative air humidity	0...95 % (non-condensing)	
Protection type	IP10	NEMA 1
Dimensions (width x height x depth)	110 x 40 x 95 mm	~ 4.3″ x 1.6″ x 3.7″
Weight	180 g	~ 0.4 lbs
Material	Aluminium	

TAMMO

07A000001



TAMMO is an expansion module for TriBox3, which converts analog signals to RS-485 Modbus RTU protocol. The analog to Modbus module provides a total of two current inputs, where both the parameter and the unit for two parameters can be set.

Technical Specifications

Power supply	12 V / 24 V (done by TriBox3)
Power consumption	< 100 mW
Connection terminal	1.5 qmm (AWG 16)
Standard	RS-485
Protocol	Modbus RTU
Analog input	2x current input: 4-20 mA (default setting in TriBox3) 0-20 mA (configurable at TriBox3)
Measurement accuracy	± 0,2 % of Full Scale Range
Measurement rate	~ 60 SPS
Connection terminal	1.5 qmm (AWG 16)
Operating temperature	-10...+50 °C
Storage temperature	-20...+70 °C
Relative air humidity	0...95 % (non-condensing)
Protection type	IP00
Dimensions L/W/H	59x32x28 mm
Weight	14 g
System compatibility	TriBox3, as of software V1.5.4
Warranty	1 year (EU & USA: 2 years)

Float

05A000005

The TriOS float is the ideal solution for use in fluctuating water levels. The float comes with two sizes of sensor brackets so that both the TriOS photometer with its 48 mm diameter and the enviroFlu with its 68 mm diameter can be attached. One sensor at a time can be attached to the float.

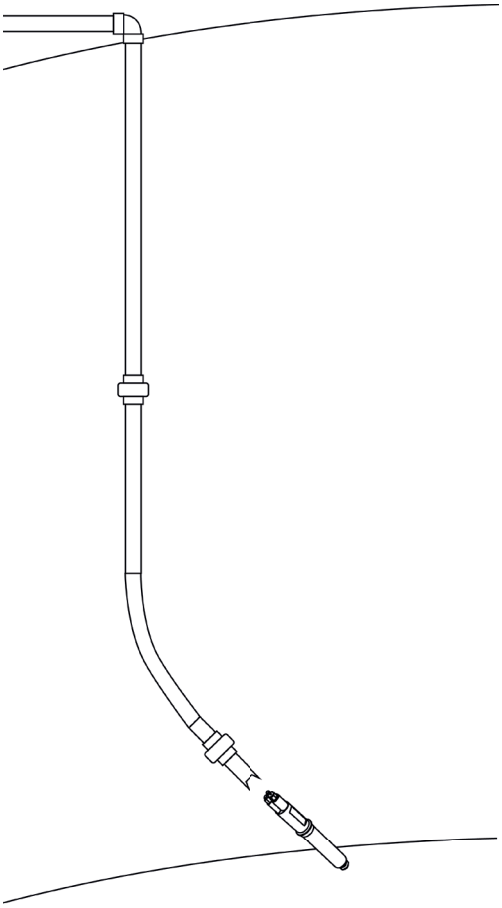
TriOS also offers sensor brackets for small sensors, such as the nanoFlu (05A000006). With this, several sensors can be attached to one float.

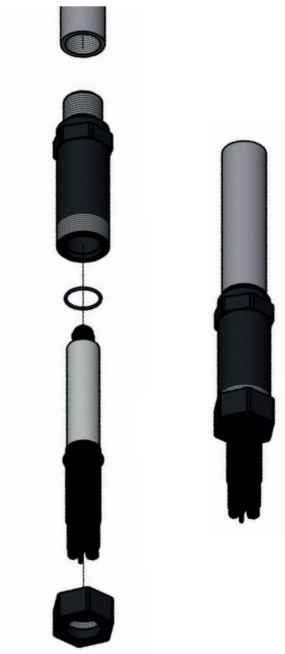
The float stays on the surface of the water with the sensor always in the medium. The float can easily be removed from the medium by its handle to do a check or clean it. Side attachments of stainless steel cables prevent the float from being carried away.

Pipe Adapter

06A0000XX

For installation in existing pipe systems, such as pool edge fixtures, TriOS offers adapter pieces with G1 or NPT1 thread for the following sensors: TpH, TpH-D, TTurb, Conductivity, Oxygen





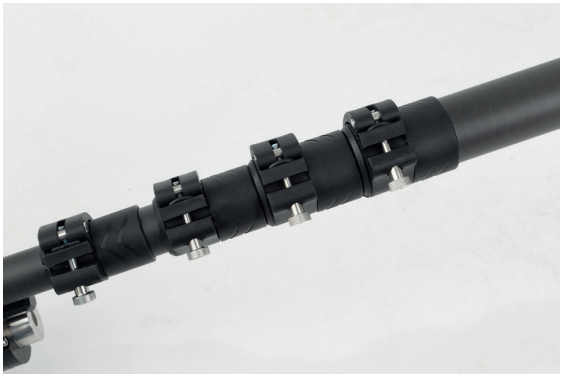
Telescopic Rod

12A000000

The new TriOS telescopic rod provides a solid and reliable mounting method for the TriOS dissolved oxygen sensor. The sensor is permanently mounted in the head section of the telescopic rod and can be immersed in the medium by extending the telescopic tubes to a distance of 6.8m. The rod can be held by hand or attached to a railing or similar with the supplied double clamp. Due to the material mix of carbon and fiberglass, the rod is grippy and light at the same time.

Technical Specifications

Dimensions LxW	6800 mm x 90 mm
Weight	2.32 kg
Material	Telescopic rod: carbon fiberglass mix, bracket: aluminum



RAMSES Frames

05A000000

Hydraulic Clamps CL48 & CL68

01A100000X

Water Quality Panel

11A10000X

The modern TriOS bypass panel makes it possible to cleanly and precisely monitor water quality on site. The sensor is passed through the FlowCells and thus analysed for various parameters. The panel can be ordered in different designs and sensor assemblies.

11A100002	Water quality panel with pH, conductivity, turbidity, chlorine, TriBox mini
11A100003	Water quality panel with pH, conductivity, turbidity, chlorine, TriBox 3
11A100004	Water quality panel with pH, conductivity, turbidity, TriBox mini

pH Buffer Set

80P000002

TriOS provides the necessary certified buffer solution with pH4 and pH 7 to calibrate TriOS TpH-D sensors. No transfer of fluids necessary, as the containers fit directly into the calibration process.

Quick and easy calibration of all EGC Quality Analyzer sensors directly at the site. No dangerous fluids, no expertise needed! Let the wizard of the TriBox guide you through every step of the process.

Panels 11A10000X

Sensor Connector Box 5-input M12 50A000001

SYSTEMS

EGC Water Analyzer

11A10001X

The EGC Water Analyzer is TriOS‘ latest development in the monitoring of various wastewater-parameters. It can be equipped with three sensors: enviroFlu for identification of polycyclic aromatic hydrocarbons (PAH), TTurb for turbidity measurements and TpH-D for the determination of the pH value.

Inside the measurement cabinet is a TriBox3 to which all sensors are connected. The Ethernet interface and the analogue outputs are directly connected to the transparent connector box.

Certified by DNV and ABS!

Equipped with the enviroFlu, TTurb and TpH-D in the appropriate configuration, a TriBox3 (from software version 1.4.22) and wire rope dampers, the analyzer has a ship approval according to IMO regulations MEPC.259(68).

Technical Specifications

Voltage supply		100 … 240 VAC, 50 … 60 Hz	
Power consumption		Max. 50 W	
digital		Ethernet	
analogue		6 outputs: 4…20 mA	
Load		max. 500 Ω	
Protocol		Modbus TCP/IP	
Parameters		PAH (MEPC.259(68)) pH (BS EN 60746-2:2003) Turbidity (DIN EN ISO 7027:2016) Temperature (of TpH-D) Flow (internal) PAH turbidity corrected	
Size (width x height x depth)		600 x 800 x 337 mm	~ 23.6“ x 31.5“ x 13.3“
Weight		43 kg (without sensors) 45.5 kg (with sensors)	~ 95 lbs (without sensors) ~ 100 lbs (with sensors)
